

Reinforced PVC Hose

A reinforced PVC hose is constructed using an inner layer of transparent PVC, which is then covered with a high-tensile polyester braid. It is then covered again with an outer layer of flexible PVC, which may be translucent or coloured. This hose is resistant to various chemicals, including acids and alkalis. It is also cadmium, silicone, and phthalate-free, making it less toxic, highly flexible, and transparent. As a result, it is perfect for use with food and drinking water. Additionally, this hose is highly durable and resistant to abrasion, making it suitable for the following applications:

- Food
- Compressed air
- Water
- Chemicals
- Gas
